Keyword Index

Aberrations. Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 2. 268
Apexification. Management of apical inflammatory root resorption: report of a case (Clinical article). 301
Apical leakage. Comparison of apical leakage shown by four different dyes with two evaluating methods. 333
Root positioning and leakage to dye in extracted teeth using reduced pressure. 63
Apical limit
Apical limit of root-canal instrumentation and obturation. part 1. Literature review (Review). 384
Apical limit of root canal instrumentation and obturation. part 2. A histological study. 394
Apical periodontitis
Effects of root canal sealers on immunocompetent cells *in vitro* and *in vivo*. 178
New perspectives on radicular cysts: do they heal? (Review). 155
Prevalence of apical periodontitis and results of endodontic treatment in an adult. Portuguese population. 161
Apical pocket cysts. New perspectives on radicular cysts: do they heal? (Review). 155
Apical true cysts. New perspectives on radicular cysts: do they heal? (Review). 155
Apicectomy
Clinical study of refractory apical periodontitis treated by apicectomy. Part. 1. Root canal morphology of resected apex. 53
Preliminary results and analysis of a new set of sonic instruments for root-end cavity preparation. 32

Bacterial eradication. Bacterial eradication from root dentine by ultrasonic irrigation with sodium hypochlorite. 242
Balanced force. The 'balanced force' concept for instrumentation of curved canals revisited. 166

Calcification. Gaining access through calcified pulp chamber: a clinical challenge (Clinical article). 367
Calcium hydroxide
Acute apical periodontitis: incidence of post-operative pain using two different root canal dressings. 343
Effect of calcium hydroxide as an intracanal dressing on apical leakage. 173
Effect of different root canal sealers on periapical repair of teeth with chronic periradicular periodontitis. 85
Gaining access through calcified pulp chamber: a clinical challenge (Clinical article). 367
Reparative hard tissue formation following calcium hydroxide application after partial pulpotomy in cariously exposed pulps of permanent teeth (Clinical article). 221
Canal preparation. Comparison of two endodontic handpieces during the preparation of root canals in extracted human teeth. 22
Canal shaping
Preparation of the apical part of the root canal by the Lightspeed and step-back techniques. 103
Shaping ability of ProFile rotary nickel–titanium instruments with ISO sized tips in simulated root canals: Part. 1. 275
Shaping ability of ProFile rotary nickel–titanium instruments with ISO sized tips in simulated root canals: Part. 2. 282
Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 1. 259
Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 2. 268
Carbonization. A histopathological study of the morphological changes at the apical seat and in the periapical region after irradiation with a pulsed Nd:YAG laser. 415
Cell storage. The influence of storage conditions on the clonogenic capacity of periodontal ligament cells: implications for tooth replantation. 137
Cell viability. The influence of storage conditions on the clonogenic capacity of periodontal ligament cells: implications for tooth replantation. 137
Cell. The behaviour and proliferation of human dental pulp cell strains *in vitro*, and their response to the application of platelet-derived growth factor-BB and insulin-like growth factor-1. 251
Chronic inflammation. Microbiological, pathological, inflammatory, immunological and molecular biological aspects of periradicular disease (Review article). 311
Clearing technique. Two canals in mesiobuccal roots of maxillary molars. 410
Clinical criteria. Microorganisms in closed periapical lesions. 39
Closed periapical lesion. Microorganisms in closed periapical lesions. 39
Compomers. Sealing ability of super EBA and Dyract as root-end fillings: a study *in vitro*. 338
Composite resin. Sealing ability of composite resin placed over calcium hydroxide and calcium sulphate plugs in the repair of furcation perforations in mandibular molars: a study *in vitro*. 79
Coronal microleakage. Sealing ability of composite resin placed over calcium hydroxide and calcium sulphate plugs in the repair of furcation perforations in mandibular molars: a study *in vitro*. 79
Coronal leakage. Polymicrobial coronal leakage of super EBA root-end fillings following two methods of root-end preparation. 348
Corrosion. Effects of sodium hypochlorite on nickel–titanium Lightspeed instruments. 290
Corticosteroid–antibiotic solution. Acute apical periodontitis: incidence of post-operative pain using two different root canal dressings. 343

Degradation. Degradation of a silver point in association with endodontic infection: a clinical report. 141
Delayed-type hypersensitivity. Effects of root canal sealers on immunocompetent cells *in vitro* and *in vivo*. 178
Dental caries. Reparative hard tissue formation following calcium hydroxide application after partial pulpotomy in cariously exposed pulps of permanent teeth (Clinical article). 221
Dental leakage. *In vitro* dentinal penetration by tracers used in microleakage studies. 90
Dental pulp disease. Effects of root canal sealers on immunocompetent cells *in vitro* and *in vivo*. 178
Dental pulp. Effect. *in vitro*, of Tifell (formocresoleugenol) on macrophage adhesion. 112
Dental. A histopathological study of the morphological changes at the apical seat and in the periapical region after irradiation with a pulsed Nd:YAG laser. 415

  Shaping ability of Quantec Series, 2000 rotary nickel–titanium instruments in simulated root canals: Part. 2, 268
Endodontic therapy. Effects of root canal sealers on immunocompetent cells *in vitro* and *in vivo*, 178

Failure. Degradation of a silver point in association with endodontic infection: a clinical report, 141
Filling materials. Effect of tubule orientation in the cavity wall on the seal of dental filling materials: an *in vitro* study, 326
Fin area. Bacterial eradication from root dentine by ultrasonic irrigation with sodium hypochlorite, 242
Furcation perforation. Sealing ability of composite resin placed over calcium hydroxide and calcium sulphate plugs in the repair of furcation perforations in mandibular molars: a study *in vitro*, 79

Glycerine. Effect of calcium hydroxide as an intracanal dressing on apical leakage, 173
Growth factors. The behaviour and proliferation of human dental pulp cell strains *in vitro*, and their response to the application of platelet-derived growth factor-BB and insulin-like growth factor-1, 251
Gutta-percha. Comparative study of retreatment of Thermafil and lateral condensation endodontic fillings, 354
  Hostparasite interaction. Microbiological, pathological, inflammatory, immunological and molecular biological aspects of periradicular disease (Review article), 311

Human. The behaviour and proliferation of human dental pulp cell strains *in vitro*, and their response to the application of platelet-derived growth factor-BB and insulin-like growth factor-1, 251

Immune response. Microbiological, pathological, inflammatory, immunological and molecular biological aspects of periradicular disease (Review article), 311
Immunology
  Effect, *in vitro*, of Tifell (formocresoleugenol) on macrophage adhesion, 112
  Quantitative analysis of lymphocytes and their subsets in periapical lesions, 233
Inflammation. Quantitative analysis of lymphocytes and their subsets in periapical lesions, 233
Instrumentation. Influence of file handle attachments on tactile discrimination: an evaluation by dental students, 100
Instruments
  Evaluating the sizes of Lightspeed instruments, 295
  Scanning electron microscope appearances of Lightspeed instruments used clinically: a pilot study, 57
Inter-appointment pain. Acute apical periodontitis: incidence of post-operative pain using two different root canal dressings, 343
Intracanal dressing. Effect of calcium hydroxide as an intracanal dressing on apical leakage, 173

Lateral condensation. Comparative study of retreatment of Thermafil and lateral condensation endodontic fillings, 354
Leakage to dye. Comparison of apical leakage shown by four different dyes with two evaluating methods, 333
Leakage
  Effect of tubule orientation in the cavity wall on the seal of dental filling materials: an *in vitro* study, 326
  Sealing ability of super EBA and Dyract as root-end fillings: a study *in vitro*, 338
Lightspeed
  Effects of sodium hypochlorite on nickel–titanium Lightspeed instruments, 290
  Evaluating the sizes of Lightspeed instruments, 295
  Preparation of the apical part of the root canal by the Lightspeed and step-back techniques, 103
  Scanning electron microscope appearances of Lightspeed instruments used clinically: a pilot study, 57
Lymphocytes. Quantitative analysis of lymphocytes and their subsets in periapical lesions, 233

Mandibular premolar. Root canal treatment of mandibular second premolar with four root canals: a case report (Clinical article), 364
Mandibular. Study of the number of roots and canals in Senegalese first permanent mandicular molars, 117
Maxillary molars. Two canals in mesiobuccal roots of maxillary molars, 410
Maxillary premolars. Vertical root fractures in adjacent maxillary premolars: an endodonticprosthetic perplexity, 127

Mechanical properties. The effect of sterilization on bending and torsional properties of K-files manufactured with different metallic alloys. 48
Mechanical sonic. Comparison of two endodontic handpieces during the preparation of root canals in extracted human teeth. 22
Microbiology. Microbiological status of root-filled teeth with apical periodontitis. 1
Microorganisms. Microorganisms in closed periapical lesions. 39
Molars. Study of the number of roots and canals in Senegalese first permanent mandicular molars. 117

Nd:YAG laser. A histopathological study of the morphological changes at the apical seat and in the periapical region after irradiation with a pulsed Nd:YAG laser. 415
Nickel–titanium files. The effect of sterilization on bending and torsional properties of K-files manufactured with different metallic alloys. 48
Nickel–titanium
- Shaping ability of ProFile rotary nickel–titanium instruments with ISO sized tips in simulated root canals: Part. 1. 275
- Shaping ability of ProFile rotary nickel–titanium instruments with ISO sized tips in simulated root canals: Part. 2. 282
- Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 2. 268
- Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 1. 259

Nonsurgical endodontic retreatment. Microbiological status of root-filled teeth with apical periodontitis. 1

Open periapical lesion. Microorganisms in closed periapical lesions. 39

Partial pulpotomy. Reparative hard tissue formation following calcium hydroxide application after partial pulpotomy in cariously exposed pulps of permanent teeth (Clinical article). 221
Pathological mechanism. Microbiological, pathological, inflammatory, immunological and molecular biological aspects of periradicular disease (Review article). 311
Periapical disease. Endodontic retreatment behaviour: the influence of disease concepts and personal values. 358
Periapical diseases. Microbiological, pathological, inflammatory, immunological and molecular biological aspects of periradicular disease (Review article). 311
Periapical lesions. Quantitative analysis of lymphocytes and their subsets in periapical lesions. 233
Periapical periodontitis. Effect of different root canal sealers on periapical repair of teeth with chronic periradicular periodontitis. 85
Periapical repair. Effect of different root canal sealers on periapical repair of teeth with chronic periradicular periodontitis. 85
Periodontal ligament cells. The influence of storage conditions on the clonogenic capacity of periodontal ligament cells: implications for tooth replantation. 137
Periradicular surgery. Preliminary results and analysis of a new set of sonic instruments for root-end cavity preparation. 32
Pharmacology. Effect, *in vitro*, of Tifell (formocresoleugenol) on macrophage adhesion. 112
Proliferation. The behaviour and proliferation of human dental pulp cell strains *in vitro*, and their response to the application of platelet-derived growth factor-BB and insulin-like growth factor-1. 251
Pulp. The behaviour and proliferation of human dental pulp cell strains *in vitro*, and their response to the application of platelet-derived growth factor-BB and insulin-like growth factor-1. 251
Pulpotomy. Effect, *in vitro*, of Tifell (formocresoleugenol) on macrophage adhesion. 112

Radicular cysts. New perspectives on radicular cysts: do they heal? (Review). 155
Radiograph. Gaining access through calcified pulp chamber: a clinical challenge (Clinical article). 367
Reduced pressure. Root positioning and leakage to dye in extracted teeth using reduced pressure. 63
Refractory apical periodontitis. Clinical study of refractory apical periodontitis treated by apicectomy. Part. 1. Root canal morphology of resected apex. 53
Retrograde filling. Preliminary results and analysis of a new set of sonic instruments for root-end cavity preparation. 32
Root-canal dressing. Acute apical periodontitis: incidence of post-operative pain using two different root-canal dressings. 343
Root-canal filling material. Effect of different root-canal sealers on periapical repair of teeth with chronic periradicular periodontitis. 85
Root-canal filling. Comparison of apical leakage shown by four different dyes with two evaluating methods. 333
Root-canal instrumentation/obturation
- Apical limit of root-canal instrumentation and obturation. part 1. A histological study. 394
- Apical limit of root-canal instrumentation and obturation. part 2. Literature review (Review). 384

Root-canal morphology. Clinical study of refractory apical periodontitis treated by apicectomy. Part. 1. Root canal morphology of resected apex. 53
Root-canal preparation. The 'balanced force' concept for instrumentation of curved canals revisited. 166
Root-canal sealer. A methacrylate-based cement used as a root canal sealer. 15
Root-canal therapy. Microbiological status of root-filled teeth with apical periodontitis. 1
Root-canal treatment
- Comparative study of retreatment of Thermafil and lateral condensation endodontic fillings. 354
- Endodontic retreatment behaviour: the influence of disease concepts and personal values. 358

Root-canal treatment of mandibular second premolar with four root canals: a case report (Clinical article). 364
Root canal
- Gaining access through calcified pulp chamber: a clinical challenge (Clinical article). 367
- Root positioning and leakage to dye in extracted teeth using reduced pressure. 63

Root canals
- Shaping ability of ProFile rotary nickel–titanium instruments with ISO sized tips in simulated root canals: Part. 1. 275
- Shaping ability of ProFile rotary nickel–titanium instruments with ISO sized tips in simulated root canals: Part. 2. 282
- Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 1. 259
- Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 2. 268

Root positioning. Root positioning and leakage to dye in extracted teeth using reduced pressure. 63
Root resection. Preliminary results and analysis of a new set of sonic instruments for root-end cavity preparation. 32
Root resorption. Management of apical inflammatory root resorption: report of a case (Clinical article). 301
Root-end cavity preparation. Preliminary results and analysis of a new set of sonic instruments for root-end cavity preparation. 32

Root-end fillings
Polymicrobial coronal leakage of super EBA root-end fillings following two methods of root-end preparation. 348
Sealing ability of super EBA and Dyract as root-end fillings: a study *in vitro*. 338
Root-end preparation. Polymicrobial coronal leakage of super EBA root-end fillings following two methods of root-end preparation. 348
Root-filled tooth. A methacrylate-based cement used as a root canal sealer. 15
Roots. Study of the number of roots and canals in Senegalese first permanent mandicular molars. 117
Rotary files
Shaping ability of ProFile rotary nickel–titanium instruments with ISO sized tips in simulated root canals: Part. 1. 275
Shaping ability of ProFile rotary nickel–titanium instruments with ISO sized tips in simulated root canals: Part. 2. 282
Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 1. 259
Rotary instruments. Shaping ability of Quantec Series. 2000 rotary nickel–titanium instruments in simulated root canals: Part. 2. 268

SEM. Scanning electron microscope appearances of Lightspeed instruments used clinically: a pilot study. 57
Silver points. Degradation of a silver point in association with endodontic infection: a clinical report. 141
Smear layer. Bacterial eradication from root dentine by ultrasonic irrigation with sodium hypochlorite. 242
Sodium hypochlorite
Bacterial eradication from root dentine by ultrasonic irrigation with sodium hypochlorite. 242
Effects of sodium hypochlorite on nickel–titanium Lightspeed instruments. 290
Sonic retrotips. Preliminary results and analysis of a new set of sonic instruments for root-end cavity preparation. 32
Stainless-steel files. The effect of sterilization on bending and torsional properties of K-files manufactured with different metallic alloys. 48
Step-back. Preparation of the apical part of the root canal by the Lightspeed and step-back techniques. 103
Sterilization. The effect of sterilization on bending and torsional properties of K-files manufactured with different metallic alloys. 48
Super EBA
Polymicrobial coronal leakage of super EBA root-end fillings following two methods of root-end preparation. 348
Sealing ability of super EBA and Dyract as root-end fillings: a study *in vitro*. 338
Surgical endodontics. Sealing ability of super EBA and Dyract as root-end fillings: a study *in vitro*. 338

Tactile discrimination. Influence of file handle attachments on tactile discrimination: an evaluation by dental students. 100
Teaching model. A teaching model for endodontic surgery. 133
Thermafil. Comparative study of retreatment of Thermafil and lateral condensation endodontic fillings. 354
Tissue reactions
Apical limit of root-canal instrumentation and obturation. part 2. A histological study. 394
Apical limit of root-canal instrumentation and obturation. part 1. Literature review (Review). 384
Titanium files. The effect of sterilization on bending and torsional properties of K-files manufactured with different metallic alloys. 48
Tooth avulsion. The influence of storage conditions on the clonogenic capacity of periodontal ligament cells: implications for tooth replantation. 137
Tooth replantation. The influence of storage conditions on the clonogenic capacity of periodontal ligament cells: implications for tooth replantation. 137
Tooth. A histopathological study of the morphological changes at the apical seat and in the periapical region after irradiation with a pulsed Nd:YAG laser. 415

Ultrasonic irrigation. Bacterial eradication from root dentine by ultrasonic irrigation with sodium hypochlorite. 242
Ultrasonics. Polymicrobial coronal leakage of super EBA root-end fillings following two methods of root-end preparation. 348

Value judgements. Endodontic retreatment behaviour: the influence of disease concepts and personal values. 358
Vertical root fractures. Vertical root fractures in adjacent maxillary premolars: an endodonticprosthetic perplexity. 127

Working length. A comparison of digitally scanned radiographs with conventional film for the detection of small endodontic instruments. 123
